Information to help us

We take great pride in providing accurate quotations to our clients to ensure transparency and avoid surprises. Therefore, we need all the necessary information and details from you. This will help us to provide you with an accurate and fair quote for your project.

To provide you with an accurate and detailed estimate, we kindly ask for a few essential pieces of information:

1. Photographs

Please share clear images of your kitchen from various angles. These will help us understand the current layout and features. (Maximum of 8 will be fine)

2. Elevation Drawings

If available, include any elevation drawings of your kitchen. These will give us insights into the vertical dimensions and specific design elements.

3. 3D Renderings

If you have 3D renderings, they will greatly assist us in visualising the space and aligning with your design intentions.

4. Postcode

Providing your postcode is essential for estimating travel time, assessing potential congestion charges and green zone fees, and identifying parking restrictions in your area.

The best way to take & send photographs

1. Daylight

Ideally, take the photographs in daylight with lighting for a clear and bright picture.

2. Complete kitchen

One or two overall shots to show the scale of the kitchen.

3. Wall by wall

We need to be able to see and count each door and drawer front as well as open shelves, over the mantle, etc. Take a photograph of each wall that has furniture.
If necessary, take two or more photographs of a long run.
We can work out an overlap if necessary.

4. Islands

Take a photograph of each side of an island.

5. Damaged areas

If there are any damaged areas, please take a close-up photograph.

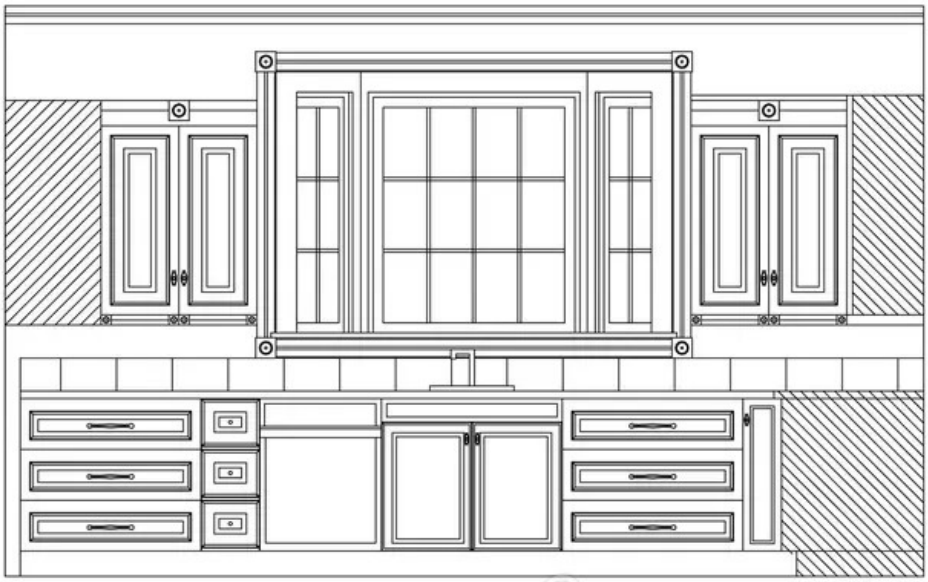

6. Details & close-ups

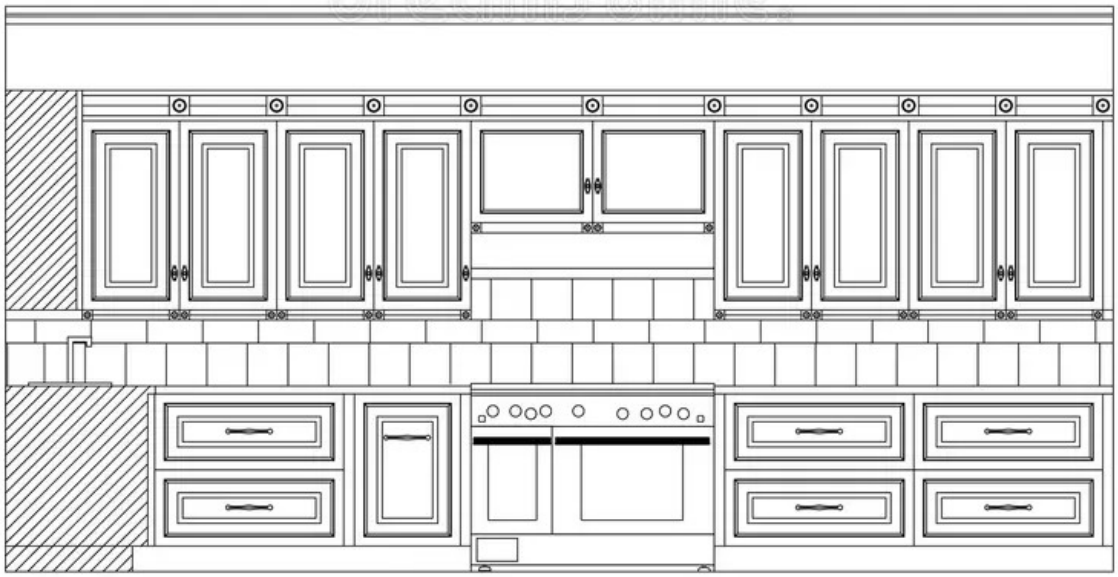

Take some close-up and detailed shots, such as unique features or designs. This will give us a better idea of the style and condition of the kitchen.

Please note that our estimate will be based on the information and photos sent. Any units not shown in the information will be charged accordingly.

Elevation drawings

Our process involves a thorough analysis of the elevation drawings to determine the scope and complexities of the project. This allows us to estimate accurately considering all factors, including materials, labour, and project timeline.

3D Rendering drawings

Our process begins with thoroughly examining your 3D rendering drawings to determine the scope of work. We then use our industry knowledge and experience to provide a detailed breakdown of the pricing for painting your kitchen cabinets.

How to send the information

1. By phone

When you have taken the photographs, each image will have an option to email directly. If you are unsure, send one at a time. Please include your email address.

2. By email

For a paper trail of the information, kindly email us at [chris@chrisgraham.uk]. Please include all relevant photos and drawings as attachments to support your estimate request.

3. Through WhatsApp

If you prefer a more convenient communication platform, you can also send us your information through WhatsApp at 07973 343252. Please attach any necessary photos and drawings for accuracy, and include your email address.

4. Via my contact form

You can send your info through the contact form on my website.
Please include your email address.

All information provided will be handled with utmost confidentiality and used solely to prepare your estimate.
